BITCOIN HALVING

Bitcoin halving refers to the event where the rewards miners receive for mining new blocks are halved. This process occurs approximately every four years and is coded into the Bitcoin protocol.

Cryptocurrency

WHEN WILL IT HAPPEN?

The last Bitcoin halving took place in May 2020. Based on the four-year cycle, the next one is expected around the year 2024.

However, specific dates can vary slightly due to the unpredictable nature of block generation.

WHY DOES IT MATTER FOR INVESTORS?

Supply and Demand: Halving reduces the rate at which new Bitcoins are produced.

With a reduced supply and consistent or growing demand, prices tend to rise.

WHY DOES IT MATTER FOR INVESTORS

Historical Patterns: Past halvings have historically led to significant price increases.

However, past performance is not indicative of future results.
